Professional Summary

Computer Science undergraduate with strong problem-solving skills and solid expertise in Java, Python, and full-stack development. Experienced in building AI-driven and machine learning applications using tools like Flask, Docker, and UNET. Passionate about backend development and applying logical thinking to real-world technical challenges.

Education

Keshav Memorial Institute of Technology, Hyderabad

2022 - Present

B.Tech in CSE(AI - ML)

8.55 CGPA

Technical Skills

Programming Languages: Java, C/C++, Python

Web Development: HTML, CSS, MERN(Familiar)

Databases & Data Management: MySQL, MongoDB,

Tools & Platforms: Git, GitHub, Docker

Relevant Coursework: Software Engineering, Deep Learning, DBMS

Soft Skills: Leadership, Teamwork, Problem Solving

Projects

Resume Scorer 🌐 | *React Python, SpaCy, Sentence Transformers, Hugging Face*

March 2025

- Developed a web platform to evaluate resumes against job descriptions using Natural Language Processing (NLP), leveraging spaCy for Named Entity Recognition and Sentence Transformers for semantic similarity; achieved over 85% accuracy in ATS score prediction during internal testing.
- Designed an intuitive user interface with React and Flask, enabling real-time skill extraction and similarity scoring; delivered over 100 personalized YouTube video suggestions and actionable feedback to 70+ users, improving interview-readiness scores by 40%

GEN AI MED 3D 🌐 | *MERN, UNET, UNETR, VIT, Docker, Unreal*

October 2024

- Performs lung segmentation, pulmonary nodule classification, and liver segmentation on 3D medical images using GenAI.
- Primarily focused on lung segmentation, with the same process applied to nodule classification and liver segmentation.
- Used python for implementing UNET and UNETR models, MERN for web app development, UNET for medical image segmentation, UNETR for advanced medical image segmentation using Generative AI, Docker for containerizing the application.

AI Tool to detect whether system is compromised 🌐 | *Python, Flask, Machine Learning*

October 2023

- Developed a desktop application to detect whether our system is compromised (without use of any IOC's) using a RandomForest model that understands the flow of the packets in your network and predict the outcome and also scan pen drive and files in your computer using Virus Total Api.

Achievements/Rewards

- * Participation in Code purple project Expo organized by IEEE WIE MJCET (2023).
- * Solved over 400+ problems on Leetcode.
- * Participant in Internal Hackathon KMIT.
- * Served as Head Boy of my school, demonstrating leadership.
